Signed John Smith

⑪

Date 22 / 05 / 2002

Authorised Signatory for this Herd Ident

### Explanatory Notes:

- ① Dams on your current herd inventory list are pre-printed. Add other cows on blank lines if needed.
- ② Sire Ident, date of insemination, or date at start of paddock joining, and Mating Code is pre-printed if joining details were previously supplied. Check details for accuracy and correct in the next column if required.
- ③ If the pre-printed Sire Ident is incorrect indicate if you have remated the cow to another bull or correct the sire information. Record the updated sire details if different from the pre-printed sire details.
- ④ Enter mating code with remate details (N ~ Natural, paddock mating; A ~ Artificial Insemination; H ~ Hand Mating)
- ⑤ Naming each animal is optional. It is recommended that the year letter and tattoo number is included as part of the name.
- ⑥ Multiple birth codes are used to identify twins and triplets. Enter one calf on the line for its dam and other calves on a blank line by re-entering the dam and sire information.
- ⑦ Record dead calves where possible, including details of birthdate, sex, birth weight, calving ease score etc.. This is valuable data.
- ⑧ Code calving groups separately if their pre-calving feed or management causes birth weight or condition differences between groups.
- ⑨ Record actual birth weight measurements (kg) only, no guesses or estimates.
- ⑩ Record calving ease scores (especially for heifers) where calvings are supervised.
- ⑪ Every page must be signed by an authorised signatory for your membership.
