EASTERN PLAINS ANGUS QUALITY ASSURANCE

All Eastern Plains Angus bulls in this catalogue are:

- ☑ Weighed, tagged & scored for calving ease at birth
- ☑ Fertility data for dams submitted to Angus Australia & TACE - mating details, preg-test results and disposal codes
- ☑ Weighed at 200D, 400D, 600D
- ☑ Mature Cow Weights for dams submitted to Angus Australia & TACE
- ☑ Docility scored at 200D & 600D
- ☑ Scrotal circumference measured at 400D
- ☑ Independently assessed for structure & temperament – raw scores printed in our catalogue
- ☑ Sire &/or Parent Verified
- ☑ Pre-sale BULLCHECK™ tested - results summary printed in our catalogue
- ☑ Ear notch tested negative for Pestivirus
- ☑ Ultrasound scanned for eye muscle area, rib & rump fat + marbling
- ☑ Vaccinated - TICK FEVER, 7in1, Vibrovax, Bovilis MH + IBR & Pestigard
- ☑ Treated with Baymec PO & Selovin LA injections
- ☑ J-BAS8 – bulls are free to enter all states
- ☑ EUCAS accredited herd

WELCOME TO EASTERN PLAINS ANGUS

The recent check in the cattle market has been sobering for all of us, albeit following the strong cattle prices in the last half of 2022. In keeping with this trend, bull sales this year so far have been back on the record highs of 2022. However, a plus for breeders in the current market conditions is that it presents an opportunity to upgrade your bull teams with newer, betting performing genetics at prices likely to be lower than those paid last year.

Bull selection can be the single, most powerful tool for genetic improvement in your herd. Since they will supply half of the genetics to all the calves they sire, the genetic influence of the bulls you purchase is far reaching & multi-generational. If you breed your replacement heifers, this influence will be compounded & will impact on your profitability for many years to come.

With this in mind, we make a genuine effort to provide independent, objective information about the breeding functionality of our bull sale team; their fertility, health status, structure/conformation, pedigree & genetic merit. Our catalogue includes all TACE EBV's, including those for Docility & Structure (which are too often omitted from sale catalogues!) along with all the economically relevant selection indexes. Raw structural & temperament scores, along with a summary of BULLCHECK™ results are also printed in the Lot Details for each bull.

01.

As ever, we urge breeders to keep in mind that it is this sort of objective information which enables you to best select bulls most suited to your program & environment. Ultimately, these are the bulls who will actually breed on to improve your profitability.

02.

Please refer to the HEALTH & BULL TESTING INFORMATION pages in this catalogue for more info about our comprehensive pre-sale bull testing program. More detail can be found on our website - https://www.easternplainsangus.com.au/bull-sale.

03.

We have a long held practice of testing our seedstock genetics in our own commercial & stud herds. Lots 1 to 30 were all used as yearlings in our Spring 2022 joinings over commercial cows or heifers, or as back-up bulls in the stud following our Spring 2022 AI program. These progeny will be on the ground by sale day.

Please join us for our BULL WALK on Wednesday 26th July, here at "Eastern Plains", from 1.30pm to 3.30pm. It's an opportunity to take your time to thoroughly inspect our bull sale team without the pressure of sale day. We'd be only too happy to answer any queries you may have regarding our program & bull preparation etc. At only a week out from our sale day, it's also an opportunity to inspect the bulls & bid with confidence via AuctionsPlus should you be unable to attend on sale day.

Alternatively, we welcome your inspection of our Bull Sale Team at any time – please call Andrew on mobile 0477 359 057 or landline 02 - 6779 4237 to arrange.

Looking forward to catching up with old clients & meeting some new in the lead up to & on sale day.

Kind regards

Andrew & Sally White

04.

SALE INFORMATION

DELIVERY
Eastern Plains Angus is offering free delivery of bulls up to 500kms. Andrew White will co-ordinate delivery – mobile 0477 359 057. Alternatively, we recommend local carrier Peter Kratz - (02) 6772 5597 or 0412 667 320.

INSPECTION
Inspection of bulls prior to sale day is most welcome – please phone Andrew White on 0477 359 057 to arrange. Bulls will be yarded for inspection from 10am on the morning of sale day.

INSURANCE
A representative from Elders Insurance Agencies will be in attendance at the sale to assist with all enquiries. We recommend that purchasers insure their bulls.

STUD TRANSFERS
Ownership transfer of bulls will be registered by the vendor with Angus Australia upon written request of the purchaser or by instruction as noted on the Buyers Instruction Slip in this catalogue.

AIR TRAVEL
The nearest airport is located at Armidale. Please allow approx. 1hr to then to drive to "Eastern Plains" and the sale venue. Qantas Airlines (131313) fly regularly to Armidale. Please contact the selling agents to make arrangements to meet planes and for transport to the sale.

REFRESHMENTS
Morning tea and lunch will be provided with the compliments of Eastern Plains Angus & prepared by the volunteers of the Guyra Can Assist group.

SALE DAY SAFETY
Visitors enter yards & bull pens at their own risk. **Children aged 16yrs & under are NOT permitted to enter the yards & bull pens. Please do NOT take prams or strollers etc into the yards & bull pens.**

MOBILE PHONE SERVICE
Mobile Service at our selling yards provided via a booster. Please note service can be SLOW & PATCHY.

REBATE
A rebate of 2% payable to outside agents who introduce their clients in writing 24hrs prior to sale day.

GST
Bulls will be sold GST exclusive. That is, if a bull is knocked down for $4,000 you will be invoiced $4,400.

RECESSIVE GENETIC CONDITIONS
The genetic status for recessive genetic conditions for each bull appears in his Lot Details (look for 'GENETIC STATUS'). For more information please see the Angus Australia website.

POSSESSION
All bulls in this catalogue are sold with 100% possession including full walking & semen rights.

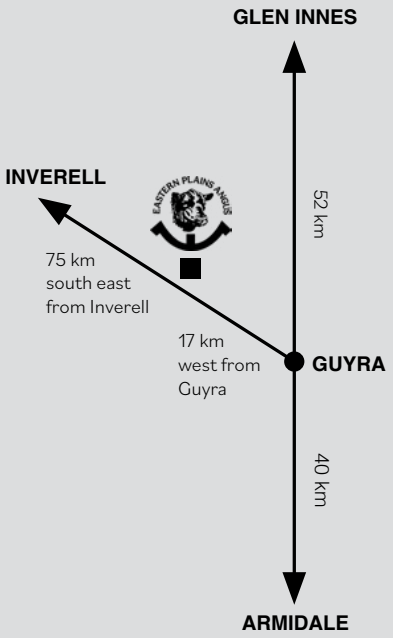
EUROPEAN UNION CATTLE ACCREDITATION SCHEME (EUCAS)
Eastern Plains Angus is an EU accredited herd.

MEAT STANDARDS AUSTRALIA (MSA)
Eastern Plains has been registered with this scheme since 1999.

AUCTIONS PLUS
The sale will be interfaced with Auctions Plus. Contact Paul Harris from Elders on 0428 600 510, Auctions Plus Sydney on (02) 9262 4222 or www.auctionsplus.com.au.

COVID
Our Sale will operate in line with current COVID restrictions. Whilst on-property we ask that you follow these. If you are ill, please refrain from attending & access the sale via AuctionsPlus or through your Agent.

HOW TO GET TO EASTERN PLAINS
"Eastern Plains" is located 18km west of Guyra, and 75km south east of Inverell. When coming from Guyra, the sale yards are an additional 400m further west of the house turn off. The sale yards are marked by a big "Eastern Plains Angus" sign.



AuctionsPlus

How to Register and Bid on AuctionsPlus

1. Go to **www.auctionsplus.com.au** to register at least 48 hours before the sale.
2. Select "**Sign Up**" in the top right hand corner.
3. Fill out your name, mobile number, email address and create a password.
4. Go to your emails and confirm the account.
5. Return to AuctionsPlus and log in.
6. Select "**Dashboard**" and then select "**Request Approval to Buy**".
7. Fill in buyer details and once completed go back to Dashboard.
8. Complete buyer induction module (approx. 30 minutes).
9. AuctionsPlus will email you to let you know that your account has been approved.
10. Log in on sale day and connect to auction.
11. Bid using the two-step process – unlock the bid button and bid at that price.
12. If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

HEALTH & BULL TESTING INFORMATION

All bulls offered have passed a Veterinary Bull Breeding Soundness Evaluation conducted by Australian Cattle Veterinarians accredited veterinarian, Dr Leisa Brown, Guyra District Veterinary Services as part of BULLCHECK™. Look out for this logo to indicate BULLCHECK™ testing results.

This included:

HEALTH & STRUCTURE
Bulls were examined for structural & gait soundness & freedom from physical & congenital defects. Bulls were inspected for penis health, sheath health & internal sex gland palpation via rectal entry for irregularities & /or infection. All bulls were certified as healthy at the time of veterinary examination.

SCROTAL CIRCUMFERENCE
All bulls presented had two evenly sized, symmetrical testicles of good tone & consistency at the time of veterinary examination. Scrotal circumference was measured as part of BULLCHECK™. All bulls had a scrotal circumference of at least 32cm. Attainment of 32cm or greater at 18 months of age is indicative of early sexual maturity & the ability to produce adequate quantities of high quality semen on a daily basis.

SEMEN TESTING
Semen samples were collected from all bulls in the catalogue as part of BULLCHECK™ and test results are reported for each bull with his Lot Details.

1. ***Sperm Motility*** is an assessment of the percentage of sperm cells in a semen sample that are observed as 'moving forward' (as well as colour). Often referred to as a 'crush side' semen test, following collection of a semen sample, a drop is placed on a microscope slide & examined, 'crush side', to assess the percentage of sperm cells moving forward. All bulls catalogued exhibited > 50% progressively motile sperm in their sperm sample.

2. ***Sperm Morphology*** refers to the anatomy or structure of the sperm. It cannot be tested 'crush side', requiring a large off-site laboratory microscope to examine a preserved semen sample. Notably, bull sperm morphology is the trait most strongly correlated with calf output & is an important measure of fertility in the bull. It will pick up defects in the sperm that 'crush side' testing cannot. A threshold guide for minimum Sperm Morphology is > 70% normal sperm for bulls used in single sire matings or AI & > 50% normal sperm for bulls used in multiple sire matings.

PESTIVIRUS
All bulls have ear notch tested negative to being Persistently Infected (PI) with pestivirus. Each bull was vaccinated with Pestigard™ on 14/4/23 & 26/5/23. We recommend purchasers maintain an annual booster vaccination program.

VACCINATION & DRENCHING
All bulls were vaccinated with Vibrovax™ & 7in1 on 14/4/23 & 26/5/23. All bulls were vaccinated with Bovilis MH + IBR on 26/5/23 & 19/6/23. We recommend purchasers maintain an annual booster vaccination program. Bulls received an injection of Selovin™ LA on 14/4/23. Bulls were drenched with Baymec PO on 14/4/23.

BOVINE JOHNES DISEASE
Eastern Plains Angus has a Johne's Beef Assurance Score of 8 (J-BAS8). We continue our involvement in BJD monitoring, testing since 1998.

TICK FEVER VACCINE
Bulls were vaccinated with chilled trivalent tick fever vaccine on 22/12/22.

BEEFCLASS STRUCTURAL ASSESSMENT

Eastern Plains Angus Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft & sold for slaughter. Sale bulls were assessed by Liam Cardile, LRC Livestock on 9/4/23.

Structural problems in cattle have a substantial effect on both the reproductive & growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns & thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer & feedlot, reducing overall productivity in the Australian Beef Industry.

Over the past decade, use of the BeefClass Structural Assessment System in the seedstock industry has produced a marked improvement in herds who have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on effect of structural improvement throughout all sectors of the beef cattle industry. Liam Cardile of ' LRC Livestock' structurally assesses many of the leading seedstock herds in Australia. 'LRC Livestock' is not involved in any genetic marketing or specific breeding advice & therefore has no conflict of interests to influence their stock appraisal.

The integrity of the structural data provided by LRC Livestock is recognised throughout the industry as Liam is a fully INDEPENDENT assessor.

The Beef Class Structural Assessment System uses a 1-9 scoring system:

- A score of 5 is ideal (NB - Temperament Score of 1 is preferable).
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant & understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals & should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued & are considered culls (no bulls in this catalogue scored 1 or 9).

Please contact Liam Cardile on 0409 572 570 should you wish to discuss the above.

HEALTH & BULL TESTING CERTIFICATION

Guyra District Veterinary Services

Guyra District Vet
207 Falconer Street
South Guyra, New South Wales 2365
Ph: 02 6779 1173
Email: reception@guyradistrictvet.com.au
Date: 07-06-2023

This is to certify that, Leisa Brown of Guyra District Veterinary Services carried out a complete breeding soundness evaluation on each bull listed in the Eastern Plains Angus catalogue.

This included:-

- A *physical examination* - to ensure structural soundness
- *Examination of the reproductive organs* - rectal palpation to examine the secondary sexual organs, measurement of scrotal circumference, palpation of the testicles and full examination of the penis and prepuce
- *Semen collection and assessment of gross motility* - using an electroejaculator and assessment of motility using iSperm technology
    - *Semen morphology* - samples were sent for assessment by a UQSMSP accredited morphologist at Australian Veterinary Semen Morpholgy (AVetSM). Semen morphology is an essential part of the veterinary bull breeding soundness evaluation. It is used to assess individual sperm cells for defects that can impact the fertility of the bull and conception rates in your herd.

To achieve optimal fertility in a herd, an individual bull needs to achieve a pregnancy rate of 65% per cycle. The ultimate aim of a bull breeding soundness evaluation is to identify any problems/risk factors that may compromise this. Each bull listed in the Eastern Plains Angus catalogue has been found to pass the requirements set by the Australian Cattle Vets Association bull breeding soundness examination.

All bulls have also been tested for pestivirus antigen by ear notch at Swans Veterinary Services and returned a negative result.

Signed: Leisa Brown Date: 07-06-2023

AUSTRALIAN CATTLE VETERINARIANS BULL CHECK CATTLE VET EXAMINED®

RECESSIVE GENETIC CONDITIONS

Putting undesirable Genetic Recessive Conditions in perspective
All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

What are AM, NH, CA and DD?
AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

How are the conditions inherited?
Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition.

For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as "carriers".

What happens when carriers are mated to other animals?
Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele, and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

How is the genetic status of animals reported?
DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on Pedigree AM free - Animal has not been tested
AM_%	_% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Database Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Implications for Commercial Producers
Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia's Breed Development & Extension Manager on (02) 6773 4618.

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?
The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?
An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals
TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed
EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:
- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy
An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs
EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING TACE ESTIMATED BREEDING VALUES (EBVs)

TACE
TransTasman Angus Cattle Evaluation

BIRTH			
Calving Ease Direct (CED)	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters (CEM)	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length (GL)	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight (BW)	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH & MATERNAL			
200 Day Growth (200)	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Growth (400)	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Growth (600)	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight (MCW)	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
Days to Calving (DC)	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size (Scrot)	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
Carcase Weight (CWT)	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
Eye Muscle Area (EMA)	cm^2	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
Rib Fat (Rib)	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
Rump Fat (Rump)	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
Retail Beef Yield (RBY%)	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
Intramuscular Fat (IMF%)	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.

FEED EFFICIENCY			
Net Feed Intake Feedlot (NFI-F)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.

%TEMPERAMENT			
Docility (DOC)	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.

STRUCTURE			
Claw Set (Claw)	Score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score (ie more even claws with less curl).
Foot Angle (Ang)	Score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score (ie straighter pastern joint with more heel depth).
Leg Angle (Leg)	Score	Genetic differences in rear leg structure when viewed from the side (angle at Lower EBVs indicate a lower Angle front of the hock).	Lower EBVs indicate a lower score (ie straight angle through the hock joint).

SELECTION INDEXES			
Angus Breeding Index ($A/Ang Breed)	$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
Domestic Index ($D/Domestic)	$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcase weight with 12mm P8 fat depth) at 16 months of age.	Higher selection index values indicate greater profitability.
Heavy Grain Index ($GN/Hvy Grain)	$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcase weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection index values indicate greater profitability.
Heavy Grass Index ($GS/Hvy Grass)	$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcase weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.	Higher selection index values indicate greater profitability.

NOTES

NOTES

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

.....

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: ..... Signature: .....

Date: .....

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au
