TransTasman Angus Cattle Evaluation

## ANGUS Coat Type

### RESEARCH BREEDING VALUES

AUGUST 2023

## BACKGROUND

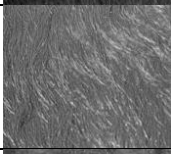

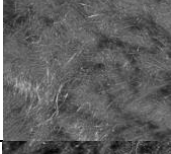

Angus Australia has partnered with the School of Environmental and Rural Science at the University of New England (UNE) to undertake research into the genetics of coat type.

Coat type, being the subjective assessment of an animal's hair length, has been identified as a trait of importance, particularly for the adaptability of Angus genetics in hotter, more tropical environments.

While research is required to confirm the relationship between coat type and traits associated with the profitability and productivity of Angus animals in Australian production systems, anecdotally, animals with shorter, sleeker coats are commonly considered to have better heat tolerance and tick resistance, and a lower dag burden in feedlot environments.

To evaluate the genetics of coat type, coat scores are now regularly analysed every two weeks in the TransTasman Angus Cattle Evaluation (TACE). Coat scores are analysed from both member collected data and from progeny in the Angus Sire Benchmarking Program, with animals scored between 350 and 720 days included in the analysis.

Coat scores were collected using a 1 – 7 score system, with a score of 1 indicating a sleek coat and a score of 7 indicating a woolly coat.

Score	Coat Type	Description	
1	Extremely Short	Hairs extremely short and closely applied to the skin. Found in <i>Bos indicus</i> , tropically adapted <i>Bos taurus</i> and in some of their crossbreds.	
2	Very Short	Coat sleek, hairs short and coarse, lying flat, just able to be lifted by the thumb.	
3	Fairly Short	General appearance smooth-coated. Hairs easily lifted, usually fairly coarse.	
4	Fairly Long	Coat not completely smooth, somewhat rough, patches of hairs being curved outwards, or whole coat showing sufficient length to be ruffled.	
5	Long	Hairs distinctly long and lying loosely; predominantly coarse.	
6	Woolly	Hairs erect, giving fur-like appearance. Fingers are partly buried in the coat. Fine hairs of under-coat give soft handle.	
7	Very Woolly	The more extreme expression of 6, with greater length and "body", and heavy cover extending to neck and rump.	

Analysis of the coat score information has demonstrated that some of the differences in the coat type of individual animals can be attributed to genetics, with coat type having a moderate heritability of 0.27 to 0.34 . It is consequently possible to generate breeding values for coat type, and select animals for use within Angus breeding programs with desirable genetics for coat type.

---

## UNDERSTANDING THE RESEARCH BREEDING VALUES

Research Breeding Values (RBVs) are provided in this publication for sires with (i) at least 50% accuracy for their Coat Type RBV, and (ii) at least one progeny with a coat type score in the analysis.

Coat Type (CT) RBVs provide estimates of genetic differences between animals in coat type, being the subjective assessment of an animal's hair length, and are expressed in score units.

**Lower Coat Type RBVs** indicate an animal is expected to produce progeny with a **shorter, slicker coat**. For example, a sire with a CT RBV of -0.30 would be expected to produce progeny that have, on average, 0.25 of a score shorter, slicker hair than a sire with a CT RBV of +0.20, all other things being equal.

## USING THE RESEARCH BREEDING VALUES IN SELECTION

The Research Breeding Values in this publication enable Angus breeders to select animals with desirable genetics for coat type, balanced with selection for other traits of importance within their breeding objective.

It is important to note that the Research Breeding Values are subject to greater potential change than EBVs routinely reported as part of the TransTasman Angus Cattle Evaluation (TACE) and should be used with caution in animal selection decisions.

Research Breeding Values may change as improvements are made to the analytical models that are used, and as additional performance information is collected.

## ACKNOWLEDGEMENTS

Angus Australia gratefully acknowledges the contributions of the University of New England (UNE), and in particular, Dr Sam Clark, Dr Hassan Aliloo and Dr Tom Granleese, in the calculation of the Research Breeding Values that are included in this publication.

## DISCLAIMER

The Research Breeding Values contained within this publication were calculated from data supplied to Angus Australia by members and/or third parties. Whilst every effort is made to ensure the accuracy of the data, Angus Australia, its officers and employees, assume no responsibility for the accuracy of the RBVs, nor the outcome (including consequential loss) of an action taken based on the information presented in this publication.
