

ANGUS on DAIRY

RESEARCH SELECTION INDEX

AUGUST 2026

BACKGROUND

Beef on dairy is the practice of cross breeding a milking dairy cow with a beef breed sire to produce calves with increased muscle and carcass yield. Whilst not a new practice, it's an expanding area of interest for many, as the Australian dairy industry looks to meet their 2035 targets of ensuring all calves enter a valued market chain. And with the rapid uptake and advancement of sexed semen technology in the dairy industry, and ample replacement dairy females, this could mean a larger proportion of dairy cows will be bred to beef sires.

The Angus on Dairy Index was developed in collaboration by the Animal Genetics and Breeding Unit (AGBU) and Angus Australia for members looking to market genetics into the beef-on-dairy space and to aid the dairy industry and the dairy-beef supply chain in their selection of Angus genetics. This index was developed in consultation with the dairy industry, meat processors, genetics companies and other stakeholders.

The Angus on Dairy Index is a terminal selection index, designed for situations where Angus bulls are being used to breed with milking dairy cows, and all progeny, both male and female are processed. It emphasises traits for calving ease, growth, carcass yield and carcass quality. Daughters are assumed not to be retained, and therefore no value is placed on any of the fertility or maternal traits. It is similar to the Angus terminal index, but the big difference is a much greater emphasis is placed on calving ease, which was noted in a 2022 survey of Australian dairy farmers as the most significant trait to dairy farmers when they make a beef sire selection (Dairy Australia, 2022).

This report includes the top 100 sires for the Angus on Dairy Research Index, that have has at least one progeny born and recorded in the past two years.

ACKNOWLEDGEMENTS

Angus Australia gratefully acknowledges the Animal Genetics & Breeding Unit (AGBU), in particular Brad Walmsley, Michael Aldridge and Natalie Connors for their assistance in the development of the Angus on Dairy Selection Index.

Angus Australia also gratefully acknowledges Dairy Australia for their collaboration in the development of this genetic tool.

DISCLAIMER

The EBVs and selection index values contained within this publication were calculated from data supplied to Angus Australia by members and/or third parties. Whilst every effort is made to ensure the accuracy of the data, Angus Australia, its officers and employees, assume no responsibility for the accuracy of the EBVs or selection index values, nor for the outcome (including consequential loss) of any action taken based on the information presented in this publication.

Further, the Angus on Dairy Index has been published on a "research" basis. This means it may change if improvements are made following further industry consultation
